

Do You Know Your Software Inventory?

On a scale from 1 to 10, how confidently can you answer the right hand questions?

1 2 3 4 5 6 7 8 9 10

How many different software programs are in use in your company?

How many different vendors created the software programs you use?

How many software programs are in use being on different patch levels?

Greater Transparency · Greater Security · Lower Costs

COMPAREX Software Portfolio Management

Can you answer the abovementioned questions with certainty? If so, how much effort would you have to invest into generating these data? If not, why not? How practical would it be, if you could clearly identify your installed software and obtain the data prepared usably at the push of a button? And this completely automated for more than 14,000 vendors and 1,000,000 releases!

The Key to Sustainable Transparency:

COMPAREX Software Portfolio Management

Your
Benefits:

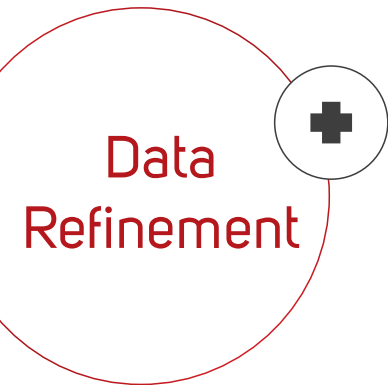

1. **Reduce software costs** by sustainably lowering purchasing conditions, such as by bundling vendors and functions. Locate unneeded software and verify the editions you need.
2. **Optimize operating costs** by lowering support and training expenditure. Reduce maintenance and support contracts and lower the number of incidents through a uniform patch level.
3. **Guarantee security** in ways such as gaining an overview of software products which are no longer supported. Identify unauthorized software, such as games, and profit from an automated analysis of the installed patch level (comparison of actual to available patch version).
4. **Obtain transparency** for making informed decisions on software use. Ad-hoc reports enable a fast analysis before contract negotiations and form the basis of sound business cases. Identify potentials and risks and meet decisions based on facts!

According to IT analyst Gartner, companies can reduce their software expenditure by up to 30% by using software portfolio management measures. In a host of projects and service environments, we also discovered that a software analysis holds enormous potential for increasing information security.

Pimp Your License Management and Software Inventory with an Upgrade Greater Transparency with Portfolio Management Platform

You already have a software inventory tool in use? A solid basis for downstream software portfolio management. In a proof of value, we evaluate the connectivity options to our software identification system. We can also make use of our own inventory solution as a completion.

Let the proof of value show you the benefits of our solution.

- ✓ Hardware and software inventory both in the client and in the server environment
- ✓ Consolidation of 'suite installations'
- ✓ Software identification, including numerous characteristics (e.g. version, edition, language and license type)
- ✓ Automated comparison of installed versions and patches with the latest market data
- ✓ Identification of suspicious and non-business software
- ✓ Classification and categorization of software (e.g. security and graphics)

Shed new light onto the information you collect and take advantage of our growing business intelligence platform to identify and analyze the software products you use. Various reports enable a 360° analysis of the software used. We can also support you during the processing phase from a risk and opportunity analysis as well as creation of business cases to the presentation of 'ready-to-go' decision proposals.

Get to know the added value you'd gain with COMPAREX Portfolio Management Platform.

As part of a proof of value you receive:

- Support with the installation on (virtual) machine & linking to the inventory
- Analysis of up to 50 % of clients and servers in the Portfolio Management Platform
- Presentation of the identified quick wins and potentials based on reports
- Offer for operation of the Portfolio Management Platform and consultation to tap the identified potential
